Status of the suitability test of the ambient air quality measuring system BAM-1020 of the company Met One Instruments, Inc. for the measured component PM10

Dear Dr. Schloesser,

herewith we give you an overview on the actual status of the suitability test of your ambient air quality measuring system BAM-1020 for the measured component PM10.

The instruments have successfully passed the suitability test, including a laboratory test as well as a field test at three different test sites.

The test report has recently achieved an overall positive assessment at the German technical committee "Test reports" and the official announcement as a suitability-tested measuring system in the "Bundesanzeiger" is to expect during the next weeks.

If there are further questions, do not hesitate to contact us.

Best regards

Department of Environmental Protection
